

PRABHU R

Linux System Administrator & IT Support Engineer

prabhu252004@gmail.com | +91 8838298172 | Tamil Nadu, India | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Driven IT professional delivering L1/L2 support, Linux system administration, and network infrastructure management across developer and ML teams. Successfully deployed Pop!_OS Linux workstations, automated password-management workflows using Python and GitHub Actions CI/CD, and built an enterprise-grade OpenVPN server and Active Directory lab from scratch. Consistently recognized for resolving critical issues — including Linux boot failures and disk-encryption errors — quickly and independently. Seeking a role where strong Linux, networking, and automation skills can drive real operational impact.

WORK EXPERIENCE

Executive Technical Support — The Netvision Technologies

Jan 2026 – Present

- Delivered L1/L2 technical support for 50+ users across hardware, software, networking, and Linux/Windows system administration, maintaining near-zero downtime across all locations.
- Deployed Pop!_OS Linux on all developer and ML team workstations from scratch, cutting environment setup time significantly and ensuring a stable, optimized workflow for each team.
- Enforced endpoint security across multiple sites by configuring Sophos certificates, OpenVPN remote access, and Quick Heal antivirus policies — ensuring 100% compliance for all remote users.
- Reduced network downtime by proactively configuring and troubleshooting LAN, WiFi, DHCP, DNS, RDP, and SSH connectivity using `ip`, `ifconfig`, `hostnamectl`, and `nslookup`.
- Built and deployed a Password Expiry Reminder Bot (Python + Bash + GitHub Actions CI/CD) that fully automated a daily manual task, saving hours of admin effort every week at zero infrastructure cost.
- Administered Linux systems daily — `apt`, `systemctl`, `useradd`, `chmod/chown`, `ps/kill` — with monitoring via `top`, `df -h`, `iostat`, and `vmstat`.
- Independently diagnosed and resolved critical Linux boot failures and `cryptsetup`/LUKS disk-encryption errors; performed preventive SSD health checks (`smartctl`) and GPU driver installations.
- Managed IP camera network integration for 10+ cameras, handling address assignment and device discovery using `nslookup` to ensure all cameras remained accessible and correctly mapped.
- Handled corporate email administration including IMAP/POP configuration and OST-to-PST migrations; performed OS reinstalls with data-safe procedures and maintained regular employee backups.
- Evaluated osTicket as the primary helpdesk platform on Raspberry Pi 4, alongside AnyDesk and UltraViewer for remote support access; configured SLA timers, email piping, and ticket routing, and delivered a benchmark report to management.
- Conducted in-depth R&D on multiple time-tracking software tools, evaluating features and performance before recommending the best-suited solution for operational use.

Network & Hardware Engineer — Cibi International Pvt Ltd

Jul 2025 – Dec 2025

- Resolved hardware, software, and OS issues for 30+ employees, ensuring all systems remained fully operational.
- Configured Windows OS, drivers, and bootable USB media for all new system deployments; verified network connectivity to integrate each machine smoothly into the office infrastructure.
- Maintained office LAN infrastructure — network switches, patch panels, and structured cabling — ensuring reliable connectivity with minimal downtime.
- Managed static and DHCP IP addressing for all workstations, printers, and network devices across the organization.
- Diagnosed and resolved hardware failures across RAM, HDD, GPU, motherboard, and peripherals; maintained a complete hardware inventory and coordinated vendor repairs to minimize asset downtime.

Penetration Testing Intern — Hacktify Cybersecurity

Aug 2024 (1 month)

- Completed HCS Penetration Testing 1-month Internship — gained hands-on exposure to cybersecurity concepts, vulnerability assessment, and penetration testing methodologies.
- Worked under certified cybersecurity professionals at an ISO-certified organization, building foundational knowledge in ethical hacking and security testing practices.

TECHNICAL SKILLS

Hardware Desktop/Laptop, RAM/SSD/HDD, GPU, Printer, Mac Mini, Raspberry Pi 4

Networking IP Addressing, DHCP, DNS, LAN, WiFi, Router Configuration, Active Directory

OS & Linux Windows 7/10/11, Ubuntu, Pop!_OS — apt, systemctl, chmod/chown, useradd, ps/kill, df -h, ip/ifconfig, hostnamectl, nslookup, Bash/Shell scripting, Docker(Basic)

Security & VPN OpenVPN, Sophos (Install & Policy Management), Quick Heal, SSL/TLS, AES-256-GCM, TLSv1.3, Data Backup

System Admin AD DS, GPO, DHCP Server, File Server, Domain Join, RDP, SSH, XRDP, Samba, cryptsetup/LUKS, ITIL practices, SLA management

Monitoring smartctl, iostat, vmstat, top, df -h, Windows Event Viewer, AnyDesk, UltraViewer

Helpdesk Tools osTicket, AnyDesk, UltraViewer, email piping, ticket workflow configuration

Automation Python, Bash scripting, GitHub Actions CI/CD, SonarQube, smtplib, SQLite, logging

Virtualization VirtualBox, VMware Workstation, Docker (basics)

Email & Camera Outlook, IMAP/POP, OST-to-PST Migration, IP Camera Configuration

EDUCATION

Bachelor of Engineering / Technology

2021 – 2025

KSR Institute for Engineering and Technology, Tiruchengode | **CGPA: 7.45**

CERTIFICATIONS

Networking Essentials Apr 2023

Cisco Networking Academy

Introduction to Cybersecurity Sep 2022

Cisco Networking Academy

Cybersecurity Essentials Nov 2023

Cisco Networking Academy

HCS Penetration Testing Internship Aug 2024

Hacktify Cybersecurity (ISO Certified) | Certificate ID: **pqmowkoazd**

PROJECTS

Password Expiry Reminder Bot • Python • SQLite • Bash • GitHub Actions CI/CD

- Designed and built an automated bot that detects expiring Active Directory passwords and delivers color-coded HTML email alerts to users and managers — Red (1–3 days), Orange (4–7 days), Blue (8–14 days) — eliminating missed password expirations entirely.
- Deployed via a GitHub Actions CI/CD pipeline that runs daily at 8 AM IST on GitHub's free tier, achieving zero infrastructure cost while ensuring reliable, unattended daily execution.
- Integrated SQLite for notification tracking with unique IDs to prevent duplicate alerts; implemented Python logging for a full audit trail across every scheduled pipeline run.

[View on GitHub →](#)

OpenVPN Server • OpenVPN • Ubuntu Linux • iptables • EasyRSA • AES-256-GCM

- Built a fully functional enterprise-grade remote access VPN server from scratch on Ubuntu Linux — no paid cloud services — secured with AES-256-GCM encryption and TLSv1.3 for maximum confidentiality.
- Configured a complete PKI using EasyRSA for CA setup and certificate management; implemented iptables NAT masquerading and UFW firewall rules to support both split-tunnel and full-tunnel client routing.
- Validated multi-client concurrent connections and end-to-end encryption via Wireshark packet capture; enforced DNS leak prevention and a VPN kill-switch to guarantee complete traffic privacy.

[View on GitHub →](#)

Active Directory Lab • Windows Server 2019 • AD DS • GPO • DHCP • VirtualBox

- Designed and built a complete enterprise Active Directory environment (lab.local domain) on VirtualBox, configuring AD DS, DNS, and a DHCP server with automatic IP scope assignment for all domain-joined clients.
- Enforced security policies via GPOs — USB blocking, Control Panel restrictions, password complexity, and corporate wallpaper; created OUs for IT, HR, and Finance with department-specific NTFS folder permissions.
- Domain-joined a Windows 10 client VM and validated user login, GPO enforcement, mapped drives, account lockout, and security audit logging through Windows Event Viewer.

Helpdesk Ticketing System – Raspberry Pi 4 • RPi 4 • Linux • Apache • MariaDB • osTicket • AnyDesk • UltraViewer

- Evaluated osTicket on Raspberry Pi 4 hardware with Apache and MariaDB under realistic IT support workloads, alongside AnyDesk and UltraViewer for remote support access; benchmarked performance, UI, and scalability.
- Delivered a detailed evaluation report with screenshots and final recommendation; configured email piping, SLA timers, ticket routing, and auto-response templates for the selected solution.
